

# Pre-Clean for extended filter life

With Donaldson's full range of pre-cleaners you can extend the life of your air filter by removing up to 90% of the dirt and contaminants before it reaches the filter. The pre-cleaners are designed specially for equipment operating in very heavy dust and debris environments, such as agricultural and construction vehicles and mining equipment.

Donaldson's pre-cleaners are self-cleaning and require no maintenance. They also offer a lower restriction, which means:

- The engine "breathes" easier
- You can reduce air filter element usage
- You will have lower costs per operating hour.

The extensive range, which includes the Donaspin and TopSpin, covers airflows from 2m<sup>3</sup>/min to 42m<sup>3</sup>/min and can separate up to 98% of incoming dirt and debris from the air intake system.
