

# Taking filtration to a new level

Unlike traditional filters, Donaldson's Triboguard DX2 high-performance filtration solution features an innovative 2-in-1 filter design that increases dirt-holding capacity by 91% compared to traditional filters, which extends the filter life and reduces maintenance costs.

The Donaldson Triboguard DX2 filter is manufactured with up to 43% more pleats than other leading filters, includes all the features of a coreless design without the expense of housing modifications, and reduces waste and disposal costs with its environmentally-friendly, fully disposable design. DX2 is ideal for demanding industrial hydraulics filtration applications such as mining, steel manufacturing and the paper and pulp industry.

Donaldson develops, manufactures, and markets a full line of industrial hydraulic filters and contamination control products and services to protect machinery and components in hundreds of applications in the factory and on heavy-duty mobile equipment.

When you need filter housings, filter heads, replace-

ment cartridges, spin-ons or hydraulic accessories, turn to Donaldson.
